JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volume 136, Numbers 1–2, 1 November 2001

Contents

R.C. Mittal and A. Al-Kurdi
Application of the Cramer rule in the solution of sparse systems of linear algebraic equations 1

H. Chen and B.D. Shizgal
A spectral solution of the Sturm–Liouville equation: comparison of classical and nonclassical basis sets 17

P. Zhou
Multivariate Padé approximants to a meromorphic function 37

B.A. Hagler
d-fold Hermite–Gauss quadrature 53

D. Zhu
A family of improved secant methods via nonmonotone curvilinear paths technique for equality constrained optimization 73

W. Koepf and D. Schmersau
On a structure formula for classical q-orthogonal polynomials 99

L. Lamberg, K. Muinonen, J. Ylönen and K. Lumme
Spectral estimation of Gaussian random circles and spheres 109

M. Chipot, R. March and D. Vitulano
Numerical analysis of oscillations in a nonconvex problem related to image selective smoothing 123

E.S. Chan and B.H. Ong
Range restricted scattered data interpolation using convex combination of cubic Bézier triangles 135

X.-Z. Liang and M.-C. Liu
Solving second kind integral equations by Galerkin methods with continuous orthogonal wavelets 149

J. Šembera and M. Beneš
Nonlinear Galerkin method for reaction–diffusion systems admitting invariant regions 163

J.-H. Park
A new delay-dependent criterion for neutral systems with multiple delays 177

M. Sadkane
A note on normal matrices 185

D. Jiang, M. Fan and A. Wan
A monotone method for constructing extremal solutions to second-order periodic boundary value problems 189

C.-S. Chien, S.-L. Chang and Z. Mei
Tracing the buckling of a rectangular plate with the Block GMRES method 199

T. Mazúch and J. Kozánek
New recurrent algorithm for a matrix inversion 219

C.V. Pao
Numerical solutions of reaction–diffusion equations with nonlocal boundary conditions 227

M. Iannelli and F.A. Milner
On the approximation of the Lotka–McKendrick equation with finite life-span 245

F.G. Lupiañez
Continued fractions and order-preserving homeomorphism 255

A.-M. Wazwaz
The numerical solution of fifth-order boundary value problems by the decomposition method 259

J.A. Ferreira, F. Patrício and F. Oliveira
A priori estimates for the zeros of interval polynomials 271

M.S. Petković and Đ. Herceg
Point estimation of simultaneous methods for solving polynomial equations: a survey 283

P. Korman
Monotone approximations of unstable solutions 309

I.L. Sofronov and W.L. Wendland
Exact linear far-field conditions for three-dimensional aerodynamic stationary transonic flows 317

T. Aziz and M. Kumar
A fourth-order finite-difference method based on non-uniform mesh for a class of singular two-point boundary value problems 337

B.J. McCartin
Exponential fitting of the delayed recruitment/renewal equation 343

S.E. Ferrando and L.A. Kolasa
Averages of best wavelet basis estimates for denoising 357

W. Han and M. Sofonea
Time-dependent variational inequalities for viscoelastic contact problems 369

O.M. Ogreid and P. Osland
More series related to the Euler series 389
